

STEP-BY-STEP TUTORIAL TO BRIDGE AKITA (ERC20) TO AVALANCHE NETWORK WITH METAMASK WALLET

For this tutorial, Metamask wallet and **AKITA** is used. The bridging is best performed on a computer browser with Metamask extension. Brave browser is recommended and can be downloaded and installed [here](#).

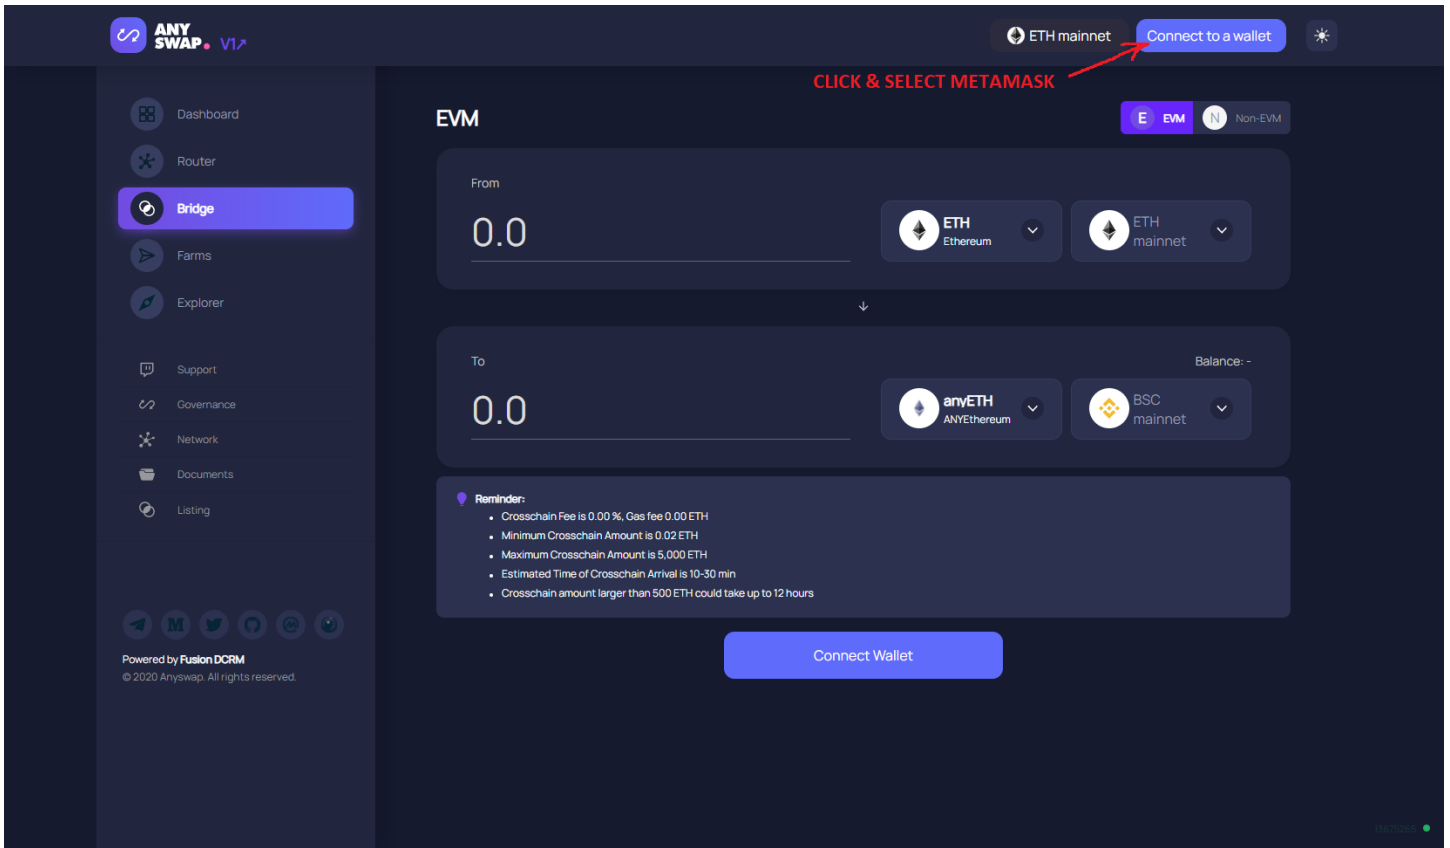

1. You need to have Avalanche Network setup in your Metamask Wallet. If you have not, go here.
2. You will also need some ETH in Metamask for the bridging fee. \$10-\$25 worth of ETH is sufficient.
3. In your Metamask, switch to Ethereum Mainnet.

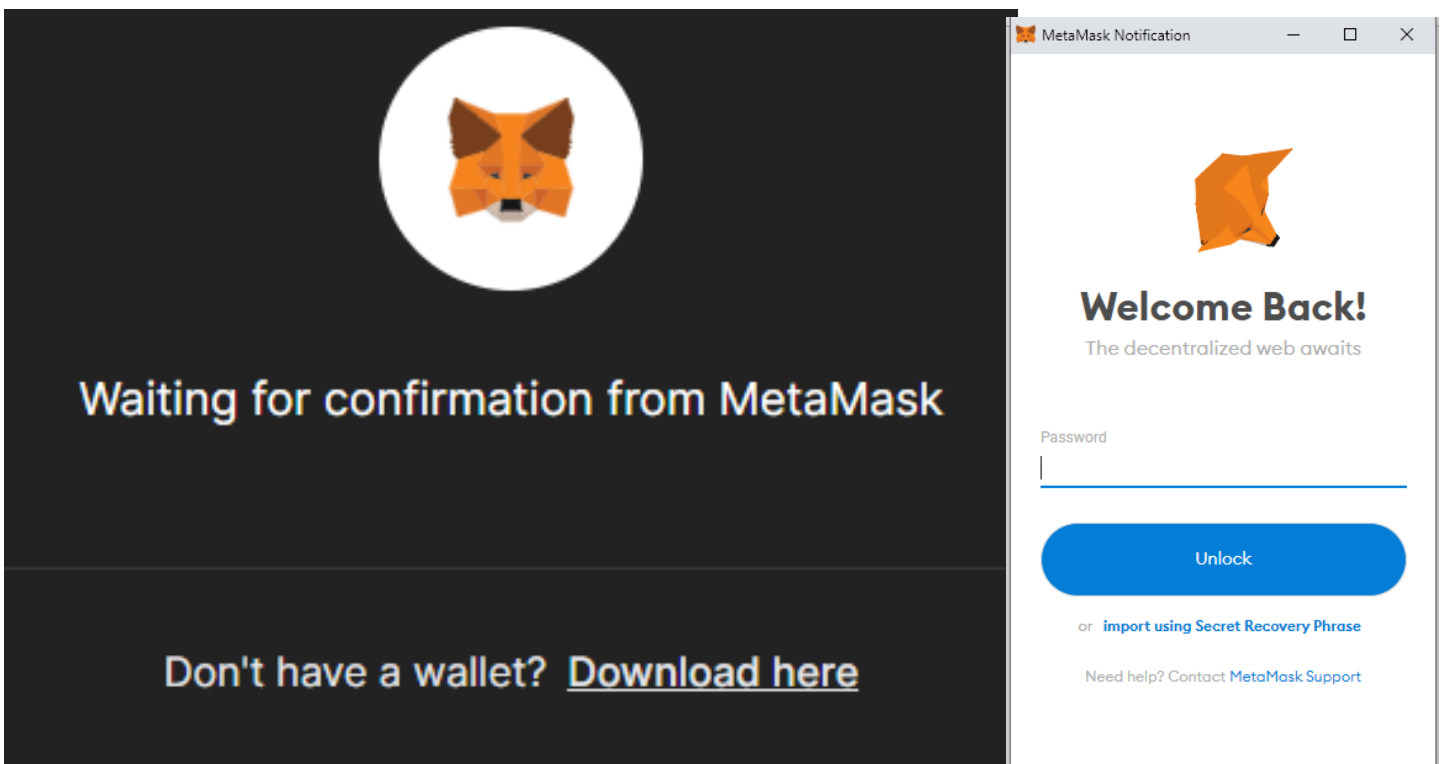

4. Go to: <https://anyswap.exchange/#/bridge>

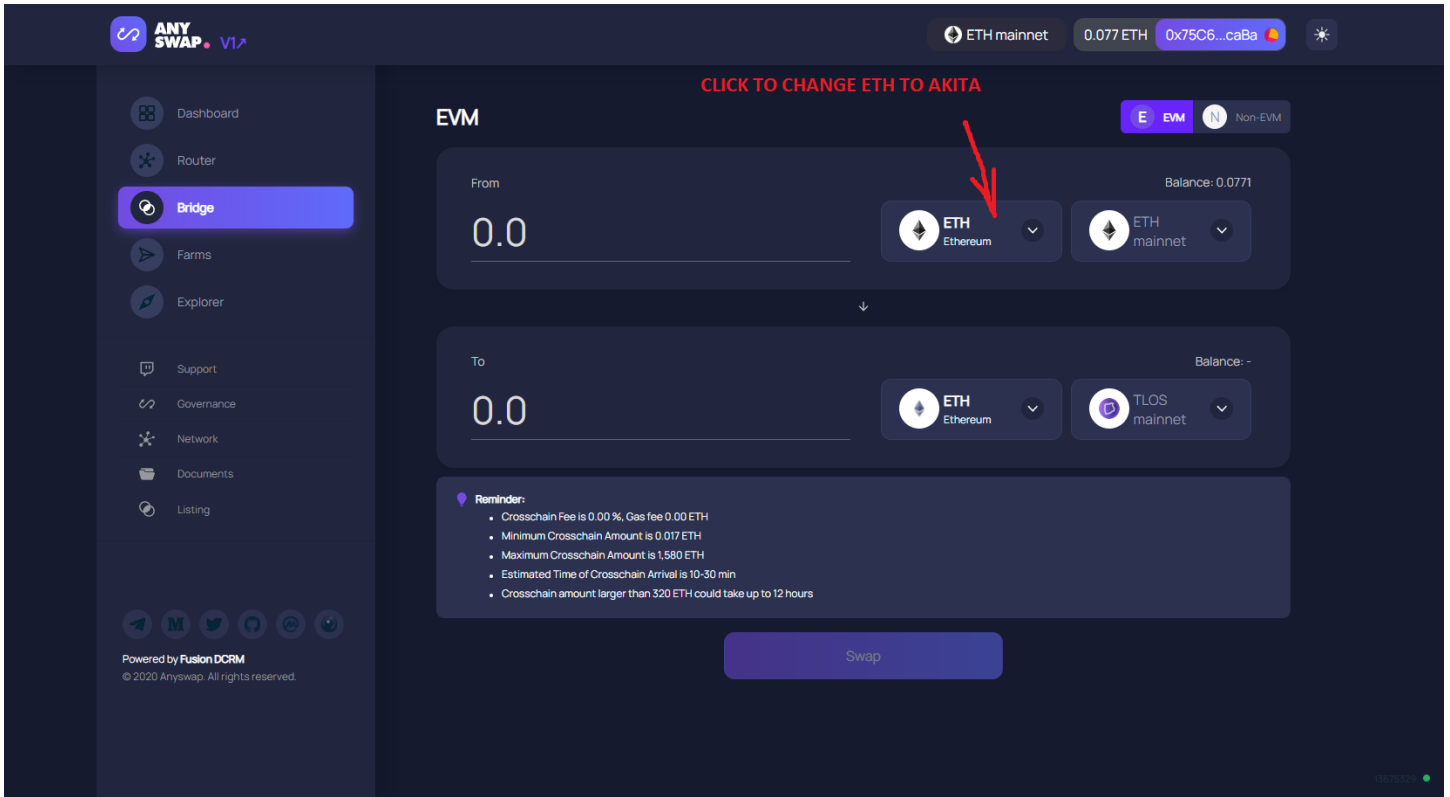

5. Click "Connect to a Wallet" and select Metamask to connect to Anyswap.

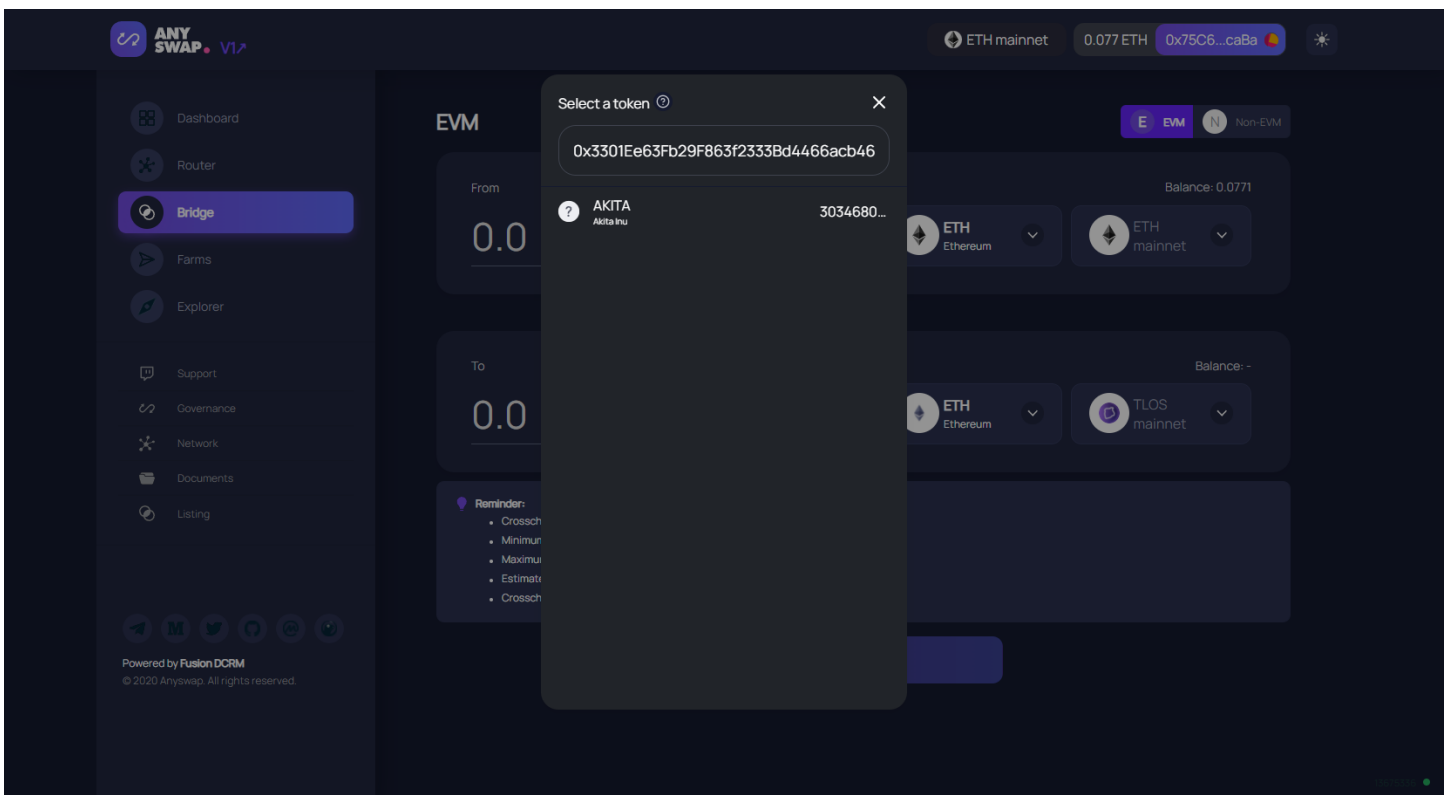

6. Enter your Metamask password.

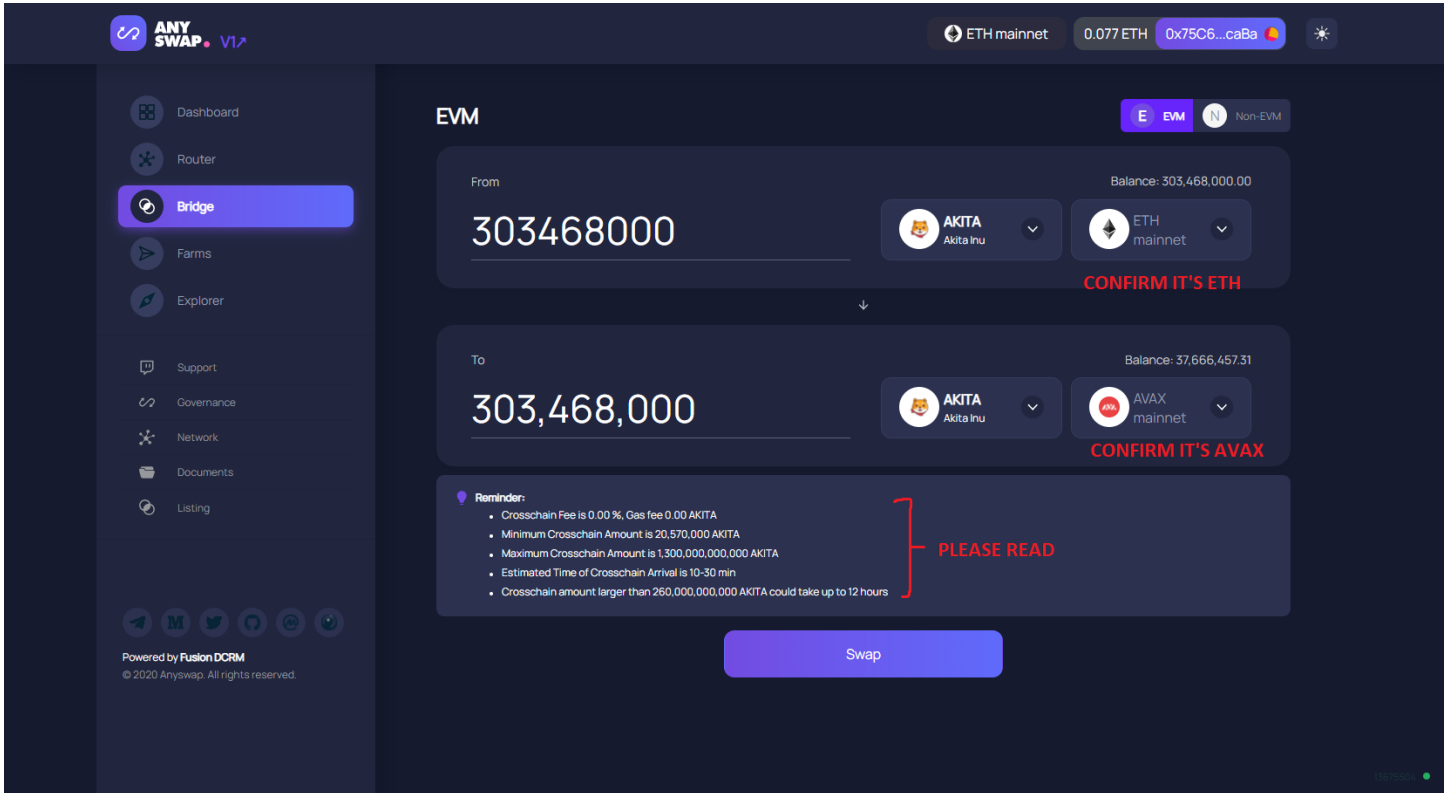

6. After connecting your Metamask wallet, click to change ETH to AKITA. A window pops up.

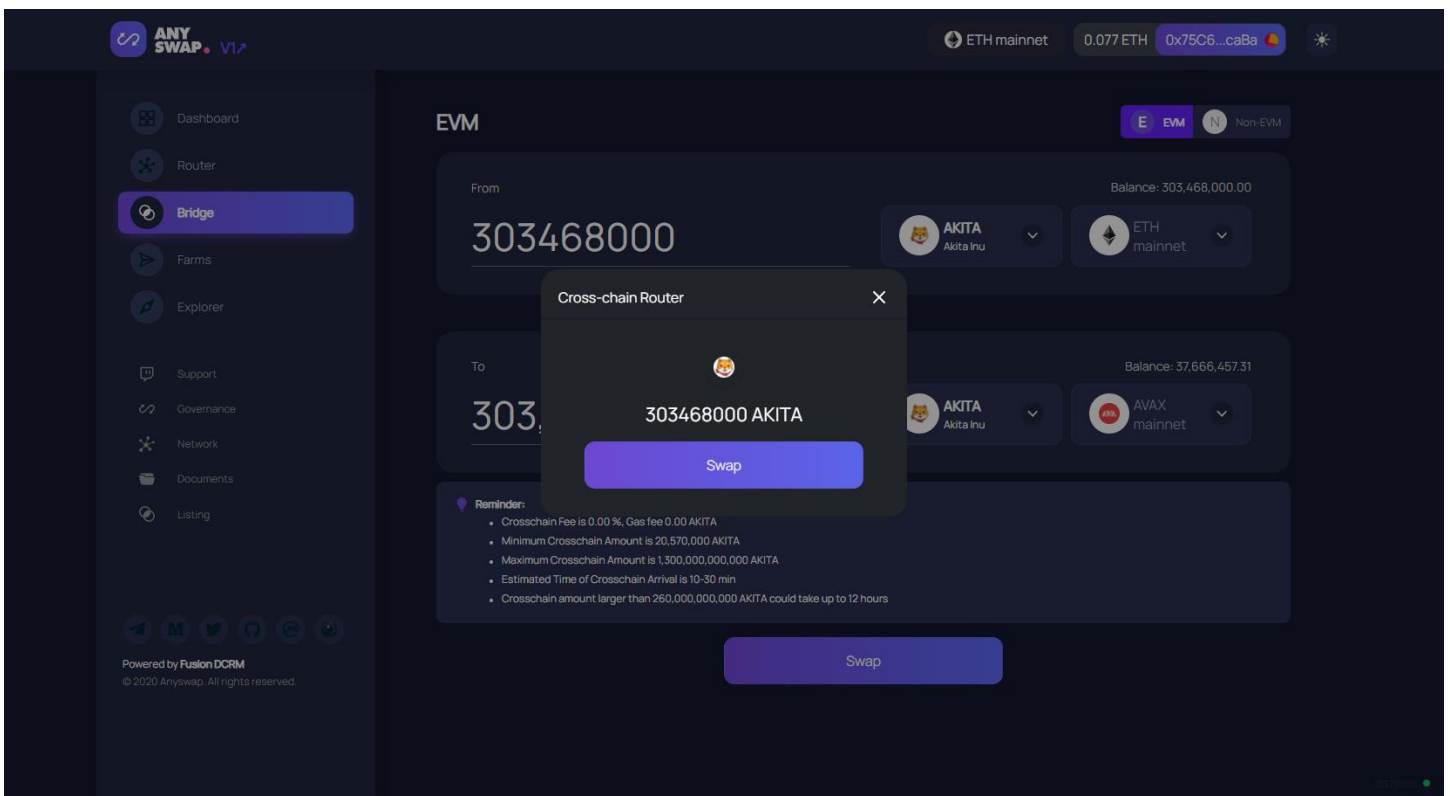

7. You may need to search and import AKITA by entering contract address in the box.
AKITA ERC20 address: 0x3301ee63fb29f863f2333bd4466acb46cd8323e6

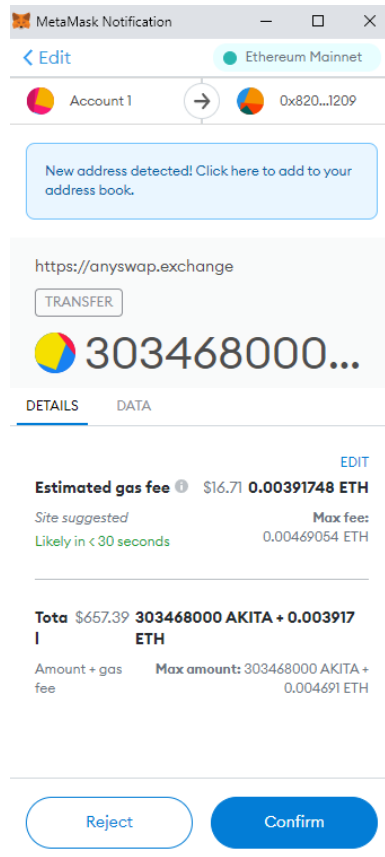

8. Enter the AKITA amount you want to bridge. Please note that the minimum amount is 20,570,000 and maximum is 1,300,000,000,000. Confirm it is FROM AKITA ETH TO AKITA AVAX. Then click “SWAP”.

9. Check amount and confirm swap.

10. The next window shows estimated ETH gas fee. Wait for favorable fee and click “CONFIRM”.

11. Bridging of your AKITA to the Avalanche Network is complete. Confirm the bridging in the **Avalanche Network** of your Metamask wallet.
